ARS 44-3 Revised October 1965

UNITED STATES DEPARTMENT OF AGRICULTURE AGRICULTURAL RESEARCH SERVICE

Tables on Hatchery and Flock Participation in the National Poultry Improvement Plan,
By States and Divisions, 1963-64 and 1964-65 and
U. S. Summary 1959-60 to date

HIGHLIGHTS

Continuing the trends of the past several years, the number and hatching egg capacity of participating hatcheries in 1964-65 was less than in the previous year while the average egg capacity per hatchery was greater. Decreases in the number and egg capacity of hatcheries occurred in all regions and with few exceptions occurred in all States.

The number of breeding birds in participating flocks decreased to 32.9 million, which was the lowest number reported in the past six years. The number of participating flocks continued to decline while the average size of breeding flocks reached an all time high of 2,286 birds.

The number of reactors found on the first test of breeding birds was down to .004 percent, the lowest on record. This represented one reactor in every 22,707 birds tested as compared to one reactor in every 18,156 birds in 1963-64 and 5,436 birds in 1959-60.
